

CONIPUR[®] PRO CLAY
*Unbeatable
throughout
the year.*

Advantage CONIPUR® PRO CLAY.

15:0

**NUMBER ONE AT
ANY LEVEL OF PLAY.**

As a professional or at club level, outdoors or indoors – CONIPUR® PRO CLAY offers first-class playing properties. The system guarantees a perfectly level playing surface. As a result it exhibits both a perfectly even bounce and consistent sliding properties. It is also easier on joints and carries a lower risk of injury compared to hard courts or carpeted surfaces.

30:0

**THE ALL-ROUNDER GETS TOP MARKS
TWELVE MONTHS OF THE YEAR.**

Whatever the weather – even in sub-zero temperatures – this surface is always playable at any altitude, in any weather and the whole year round thanks to frost resistance and winter-proof lining. The court can be used sooner than any other model after rain. The reason: the CONIPUR® PRO CLAY clay court system is highly water-permeable.

40:0

**A TOP PERFORMER IN
TERMS OF COST.**

CONIPUR® PRO CLAY pays for itself several times over. It is inexpensive to maintain. The court's weather-resistant properties mean that play is possible in early spring and late autumn, so its capacity for use is increased. These improved conditions for year-round play are accompanied by low maintenance costs and an above-average service life. In short, in terms of value for money and cost efficiency, CONIPUR® PRO CLAY is ahead of the field.

Game,
set and
match

**UNBEATABLE
INDOORS.**

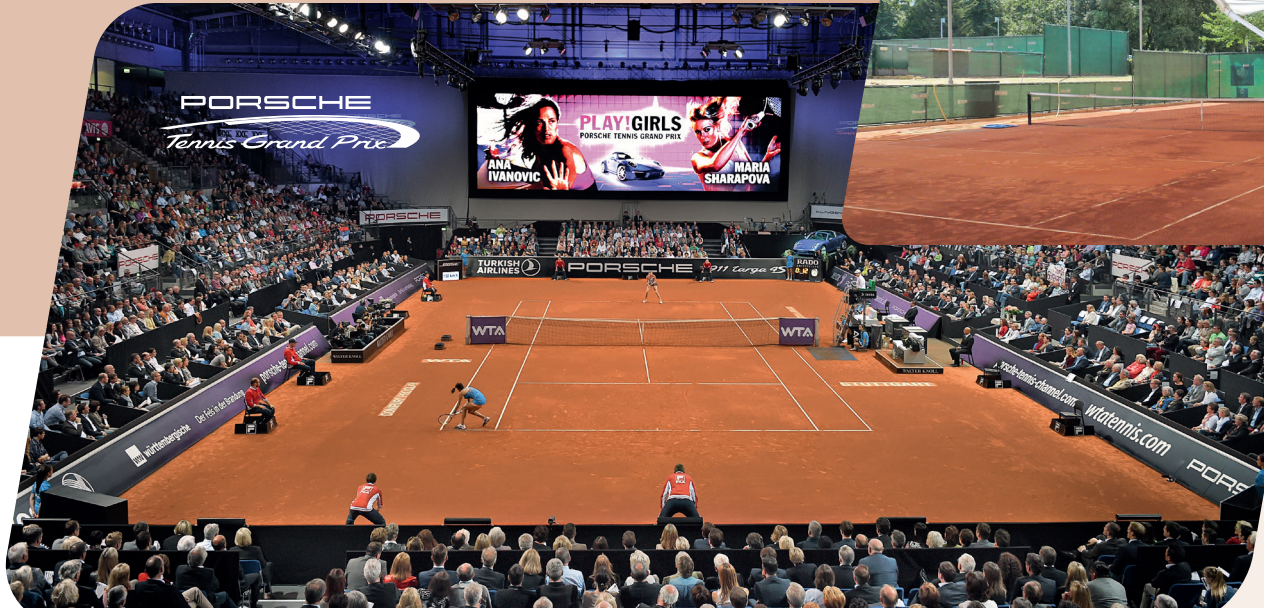

Indoors, CONIPUR® PRO CLAY is simply unbeatable thanks to MST. The low dust development with a minimum of maintenance provides professionals as well as amateur athletes with the perfect opportunity to prepare for the clay season during winter and spring – without being dependent on the weather. A clear winner.

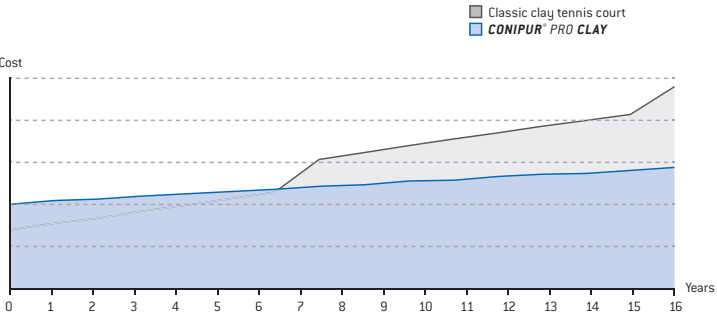

MST – MOISTURE STORAGE TECHNOLOGY

Thanks to MST (Moisture Storage Technology), the moisture level of the surface can be kept constant over a couple of weeks, thus ensuring a minimum of dust generation. If necessary, the sand must be treated with MST. MST is also environmentally friendly and completely odourless.

The winner both in- and outdoors.

CONIPUR® PRO CLAY from CONICA is an International Tennis Federation (ITF)-certified all-weather clay court system. It consists of a base layer of brick chippings, which are thickened with a special binding agent and spread with finely crushed brick on top. The surface can be used both in- and outdoors.

With its compact and perfectly level surface, CONIPUR® PRO CLAY guarantees excellent and consistent playing conditions. It is playable outdoors throughout the year and requires very little maintenance – an advantage that conventional clay courts are unable to offer. In addition, the system is perfectly suited for use indoors as a special technology allows the sand to hold the moisture longer on the surface and the dust development is noticeably reduced.

The CONIPUR® PRO CLAY clay court system can be installed on existing clay, artificial turf or carpeted surfaces.

SYSTEM DESIGN.

Swiss-quality. All over the world.

CONICA is your ideal partner for first-class sports and recreational area flooring. The product portfolio includes system solutions for in- and outdoor athletics tracks, multifunctional facilities, sports and multi-purpose halls, playgrounds and tennis courts. Our artificial turf, EPDM granules and black granules supplement our extensive range. CONICA uses polyurethane, a high-quality plastic, for these products.

CONICA has been a byword for Swiss quality since 1977. Continuous research and development ensures that the flooring always gives a peak performance on an athletic, economic and ecological level. CONICA is well established among planners, operators, organisers and athletes worldwide, and is certified by a large number of major organizations.
